ANGELCARE / CAREERS / GLOBAL 2027

THE MASTER ENGINEERING BLUEPRINT

Complete product architecture, public experiences, candidate and hirer operating systems, canonical workflows, trust, UX contracts and release gates.

01
PUBLIC WORLD
Discover & trust

02
CAREER STUDIO
Apply & progress

03
HIRING STUDIO
Recruit & hire

A4 PREMIUM EDITION · PRODUCT + ENGINEERING CONTRACT

19 OCTOBER 2026 | PROPOSED R1 / PRE-IMPLEMENTATION

ANGELCARE MARKETPLACE · ADDITIVE DOMAIN · NO MONETIZATION

EXECUTIVE DECISION BRIEF / 19 OCTOBER 2026

Build a full employment ecosystem. Not a job-board skin.

AngelCare Careers 2027 is a dedicated global employment world for adult professionals and legitimate employers across childcare, education, pediatric health, domestic family support, hospitality, youth activities and adjacent child-focused institutions. It must feel as mature as a leading global recruitment platform while retaining AngelCare's specialized identity.

DECISION IN ONE SENTENCE

Authorize one additive Careers domain with an indexable public world, dedicated candidate and hirer entry journeys, two fully operational portals, shared recruitment authorities and an internal trust/administration capability.

CANDIDATES

Discover authentic jobs, build a portable professional identity, apply smoothly, track outcomes and communicate in one Career Studio.

HIRERS

Create legitimate vacancies, discover opt-in talent, coordinate interviews, make offers and close hires in one Hiring Studio.

PUBLIC ECOSYSTEM

In-depth sector fronts, employer pages, international discovery, transparent role information, salary/review information only when grounded.

ENGINEERING

Reuse existing identity, admin, Studio and release authorities. Make Careers additive and separate from purchasable services.

Board-level acceptance conditions

- One candidate and one hirer must complete a real, auditable hiring journey with no checkout, subscription, or future add-on dependency.
- Every public vacancy must correspond to a canonical, legitimately published record. Unverified claims, fictional statistics and fabricated trust cues are prohibited.
- Signed-in experiences must be role-safe; household details, candidate files, recruiter notes and verification evidence cannot leak through public routes.
- Every screen must support real empty, loading, success, error, permission-denied and interrupted-device states.
- No source mutation begins before an actual repository authority inventory and route/permission reconciliation.

STATUS NOTE — This is the proposed product and execution contract. It is not evidence that Careers already exists or that the current repository has been inspected. Engineering gate G0 establishes source truth before implementation.

DOCUMENT GUIDE

Contents & decision sequence

Organized for product leadership, experience design, backend engineers, frontend engineers, QA/security, and release operators. Every section identifies what should exist and what must be proven before shipment.

READING ROUTE

Start with the system map and public/portal contracts (01–07); use the domain, permission and lifecycle specifications (08–12) to implement; deliver through the staged gates and final acceptance records (13–17).

NORTH-STAR CONTRACT

01 Product doctrine & system topology

A global, child-sector-specialized employment product that is simple for users and disciplined under the hood.

The four worlds

WORLD	OWNS	DOES NOT OWN
Public Careers	Discovery, sector/occupation/location fronts, employer profiles, career resources, candidate/hirer acquisition.	Application private data, employer internal evaluations, sensitive verification files.
Candidate Career Studio	Professional identity, CV/portfolio, visibility, saved jobs, applications, inbox, interviews, offers.	Employer team membership, hiring decisions or internal candidate notes.
Hirer Hiring Studio	Organization identity, roles/sites, vacancies, applicant pipelines, talent pools, interviews, offers.	Candidates' private job-seeking activity outside consented hiring context.
Existing Admin + Careers	Moderation, verification, taxonomy/editorial oversight, reports, appeals, audit and incident operations.	Unrestricted reads without traceable admin permissions.

Non-negotiable boundaries

- One platform identity authority; role-aware UI entry points and explicitly authorized organization membership.
- Careers vacancies are employment records, not sellable service products: no cart, product SKU, checkout, marketplace fulfillment or marketplace seller permission implied.

- Preserve current Marketplace header, 12-storefront navigation, global footer, homepage worlds, Studio/public experience ownership, Families/Services, Academy and DCE authorities.
- Country, city, occupation, employer setting, language and mobility are search/taxonomy dimensions; no separate engine per nation or sector.
- Core end-to-end recruitment is present in R1. Monetization and post-hire commercial operating products are expressly excluded.

EVERY PUBLIC FRONT IS FUNCTIONAL

02 Public information architecture

The public experience must support discovery, comparison, credibility, and navigation into real actions - not merely explain the product.

Primary navigation & role entry

Desktop: Careers brand · Jobs · Sectors · Employers · Jobs Abroad · Career Resources · Find a job / Build my profile · Post a job · Sign in · language selector. **Mobile:** accessible compact navigation with a persistent primary search/action affordance. Signed-in header shows actual role and a guarded context switch when eligible.

PUBLIC FRONT / PROPOSED ROUTE	MINIMUM EXPERIENCE	INDEX POLICY
/careers	Job/location hero search, sector gateway, real current roles, employers, international discovery, trust and role CTAs.	Index
/careers/jobs	Search, filters/chips, relevance/date sorting, pagination, clear/reset, saved searches and error/empty states.	Index landing; control filter parameters
/careers/jobs/[id]	Authoritative role, salary if declared, location, employer, duties, apply/save/report/share, expiry/refresh.	Index only live eligible jobs
/careers/sectors · /sectors/[slug]	Visual employer settings, roles, current roles, editorial guidance, related sectors.	Index substantive content
/careers/roles · /roles/[slug]	Occupation expectations, skills, salary evidence if available, actual openings.	Index substantive content
/careers/locations/...	Country/city discovery, jobs, employers, useful local navigation.	Avoid combinatorial thin pages
/careers/abroad	Destination filters, overseas acceptance, language, sponsorship and relocation declarations.	Index
/careers/employers · /employers/[id]	Directory; identity/profile, workplace facts, published vacancies and approved reviews.	Index public institutions; household privacy
/careers/salaries · /reviews	Transparent evidence, methods and moderated content; no invented results.	Only supported published content
/careers/career-guides · /[slug]	Guides, CV/interview advice, career progression, international practical topics.	Index authored editorial
/careers/for-candidates · /for-employers	Separate benefits, steps, screenshots only from actual implemented UX, direct entry actions.	Index
/careers/how-it-works · /trust	Real workflows, verification distinctions, warnings, candidate/employer rights.	Index
/careers/help · /contact · /about	Support search, answers, real channels, brand/entity identity and escalation.	Index appropriate public pages

PUBLIC FRONT / PROPOSED ROUTE	MINIMUM EXPERIENCE	INDEX POLICY
/careers/terms · /privacy · /cookies · /community-guidelines · /accessibility	Effective policy documents, plain language, version and contact information.	Index as appropriate
/careers/report	Safe guest/logged-in report, reference/receipt and support escalation.	Usually noindex

These are **proposed** route families. No path, endpoint, existing component or table is represented as verified until G0. Stable records must resolve after slug changes.

PUBLIC UX EXPERIENCE CONTRACTS

03 Homepage, search & job detail

The homepage is a high-density, credible navigation destination. Its success is measured by purposeful journeys into real listings, not decorative modules.

Homepage: required editorial stack (top to footer)

ORDER	MODULE	ACTION & QUALITY RULE
H01	Hero & search	Role/keyword plus location; country and domestic/abroad controls; submit preserves query.
H02	Sector gateway	Image-rich linked sectors; accessible labels; taxonomy-backed, no fake inventory.
H03	Current opportunities	Actual published roles with salary only when declared and real freshness/status.
H04	Search refinements	Profession, workplace, arrangement, age cohort, language, compensation, experience.
H05	Jobs abroad	Destination discovery with employer-declared mobility evidence.
H06	Employers	Approved real profiles and media; no invented logos or review scores.
H07	Two journey explainers	Candidate and hirer steps with functioning CTA routes.
H08	Career intelligence	Publish salary/review/editorial units only where source records exist.
H09	Trust & support	Verification wording, fraud reporting and clear help contact.
H10	SEO / footer explorer	Curated populated role/country pages, full policies, careers links and support.

Search results UX

- Flexible natural keyword with controlled synonyms and typo tolerance; location suggests country/region/city without assuming visa eligibility.
- Filter chips remain visible and removable; shareable/searchable URL encodes filters. Sorting cannot mutate source vacancy records.
- Each result includes occupation, employer visibility, location, arrangement, salary + unit/currency if declared, update date, relevant tags and real published/expiry state.
- No-results view proposes fewer filters, adjacent towns or related specialties; never fabricate jobs to fill a grid.
- Unpublished/expired/paused/flagged jobs are excluded from current search; links to closed records receive a clear closed-state experience.

Job Detail Pro: required anatomy

REGION	REQUIRED CONTENT / BEHAVIOR
Decision header	Position title, actual employer / privacy-safe household alias, approximate location, job status, publish/updated timestamp; apply/save/share/report.
Terms & compensation	Role arrangement, hours/schedule, salary amount/range and currency when declared, clear benefits; never guess pay.
Responsibilities	Age group, institution environment, professional duties, qualifications, languages, skills, experience, requirements.
Employer identity	Link to credible approved profile; checked facts differentiated from employer-provided assertions.
International segment	Overseas applicants accepted, employer-declared sponsorship and relocation; not legal eligibility determinations.
Actions	Apply goes to resumable flow; already-applied state; expired/closed ineligible for new submission; abuse report always accessible.
Related discovery	Only valid related live roles, sector and location navigation, no fake scarcity or invented application figures.

ONE-CLICK CREDIBILITY TEST

From a search result, the visitor must reach an authentic job page, understand its requirements and terms, decide whether it suits them, and start an application without unnecessary account or content friction.

JOBSEEKER OPERATING SYSTEM

04 Candidate entry, identity & Career Studio

The candidate journey must feel like a career workspace, not a large form attached to a vacancy.

CANDIDATE CONTINUITY PATH

Authentication journeys — separate screens, common security

- Branded candidate sign-up, sign-in, email confirmation, forgot/reset password, session expired, suspicious activity, account locked, security challenge and sign-out.
- Progressive onboarding: credentials → confirmation → occupation and location preferences → useful Career Studio; avoid compulsory complete-CV entry before the user receives value.
- If user starts from Apply, preserve vacancy ID, form draft, document selection and return URL across signup, recovery and verification.
- Use existing identity authority and password-manager-friendly, accessible authentication; optional passkeys/social login only if supported by current source.
- Profile is private by default; public/recruiter discoverability requires explicit user choice; separate visibility from application-specific sharing.

Candidate portal: complete module-level contract

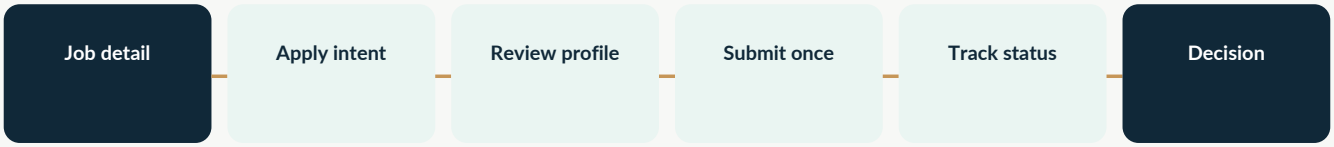

SCREEN / ROUTE SUFFIX	MUST DO
Portal home · /	Relevant actual jobs, next steps, pending interviews, application drafts, verified real notifications; never fake KPI totals.
Job discovery · /jobs	Advanced authenticated search linked to the same canonical public job detail.
Saved · /saved	Save/unsave and organize opportunities; status when a job expires or closes.
Applications · /applications	Draft, submitted, declined/withdrawn and pending records; search/filter and a clean progress display.
Application detail · /applications/[id]	Submitted snapshot, permitted timeline, recruiter communication, interview/offer actions, withdraw, request support.
Career Passport · /passport	Headline, education, employment history, qualifications, languages, age cohorts, experience and preferences.
CV & portfolio · /cv-portfolio	Upload with file validation, review parser suggestions, manage revisions and approved professional samples.
Interviews · /interviews	Agenda, timezone, response/reschedule options and verified actual meeting details.
Inbox · /inbox	Threaded secure employer conversations, controlled attachments and report tools.
Alerts · /alerts	Saved searches, frequency, countries, salary/role filters, alerts, unsubscribe.
Discoverability · /discoverability	Opt-in profile search, discreet mode, blocked organizations and information visibility.
Career insights · /insights	Actionable profile suggestions, skills gap, career path, transparent match reasons.
Settings / help	Notifications, sessions, account security, export/delete requests, support/appeals.

THE CORE TRUST-GENERATING TRANSACTION

05 Application, interview & offer journeys

An application is not a form submission only. It creates an immutable hiring record, triggers messages and remains intelligible throughout its lifecycle.

APPLICATION SYSTEM PATH

Atomic apply contract

MOMENT	BEHAVIOR / INVARIANT
Before signup	Application intent, chosen vacancy and authored answers persist while identity is established.
Prepare	Reuse Career Passport/CV, prompt only for job-related questions; sanitize uploads and review automatically extracted information.
Review	Candidate sees the exact answers, chosen CV, employer, job, submission scope and sharing consent.
Submit	Server checks vacancy open and candidate eligible for submission, writes one canonical application and immutable snapshot.
Receipt	Real submission ID, timestamp and reachable application detail; notify both sides through reliable delivery.
Changes	Editing private Career Passport must not silently change submitted evidence; policy governs amend/withdraw/reapply.
Status	Candidates see honest, comprehensible stages; employer-only notes, scorecards and other candidates remain private.
External apply	Explicit redirect disclosure; never claim AngelCare tracks an off-platform application if it cannot.

Interviews: built to prevent misunderstandings

- Scheduling stores UTC instants and explicit user time zones; invitation shows each party's correct local time.
- Candidates can confirm, decline, request rescheduling and understand meeting format, location/online link and panel contact.
- Employers can invite authorized panelists, record role-relevant evaluation and track proposal/acceptance/completion without faking attendance.
- Calendar invitations/reminders derive from authoritative interview records and recover from notification failures without duplicating appointments.

Offers: independently auditable decision flow

An employer prepares and sends a structured offer with job reference, position, schedule, compensation/terms, response deadline if present and appropriate qualifications. Candidate acceptance/decline must be captured clearly. An employer-only pipeline move must never be represented as proof that the candidate accepted a job.

> **NORTH-STAR EXPERIENCE**
>
> A mobile candidate can begin an application, lose connectivity, return, complete verification, submit exactly once, receive a durable receipt, exchange messages, attend an interview and respond to an offer without ever losing their history.

EMPLOYER RECRUITMENT OPERATING SYSTEM

06 Hirer entry & Hiring Studio

Shared domain, differentiated usability: a household and a multi-site institution receive the capabilities they need without becoming different platforms.

Hirer registration + legitimacy sequence

HIRER ONBOARDING

Offer employer-type choices: private family, nursery/preschool, school/college, pediatric or therapy setting, hotel/youth activity, NGO/public institution, multi-location organization and other child-sector employers. Start a real job draft early. Save it even when verification is not complete.

EMPLOYER MODE	UX ADAPTATION
Private household	Compact posting wizard, approximate public location, role schedule, household alias, safe interview and professional communication.
Small nursery / school	Role templates, candidate pipeline, screening questions, interview kits, shared team actions.
Institutional group	Organization/sites/branches, job ownership, delegated recruiters, panel review, scoped metrics and permissions.
Healthcare / therapy / hospitality	Setting-specific occupations, specialist qualifications/availability, branch jobs and role-related requirements.
NGO / public institution	Formal recruitment fields, publication windows, panel roles, document and audit histories when needed.

Hirer portal: complete module-level contract

SCREEN / ROUTE SUFFIX	MUST DO
Portal home · /	Genuine openings, application needs, interviews, offers and verification tasks.
Vacancies · /jobs	List/manage draft, published, paused, expired, filled, closed, archived; duplicate/pause/renew with reasons.
Create job · /jobs/new	Guided writing, occupation, sector, site, duties, salary/unit, schedule, language, screening, international declarations, preview.
Job overview · /jobs/[id]	Current canonical state, revision history, preview, publication actions and linked candidate pipeline.
Applications · /applications	Cross-role inbox, relevant filters, guarded actions and clear ownership.
Candidates · /jobs/[id]/candidates	Accessible kanban/list, structured evaluation, comparison, notes, shortlist and stage movement.
Talent search / pools	Discover opted-in professional profiles, explain privacy, save consenting talent for later.
Interviews / offers	Invite, coordinate time zones, panels, evaluate, send structured offer, record actual responses.
Inbox	Authorized candidate threads, notifications and safe templates.
Team	Invitations, organizational roles, site scopes, revoke/change privileges, audit.
Organization / sites	Manage real identity, approved logo/media, locations, public employer profile and jobs.
Verification / insights / settings	Evidence/status correction, real funnel analytics, employer controls, security, support.

WORLDWIDE REACH WITHOUT NEEDLESS COMPLEXITY

07 Global taxonomy, search & mobility

International scope is delivered through consistent occupation and location data, credible employer declarations and useful search - not a custom product for every country.

Six independent matching/search axes

AXIS	CONTROLLED ATTRIBUTES	WHY INDEPENDENT
Employer setting	Household, nursery, school, clinic, hospital, hotel, NGO, camp, support services...	A hospital driver and a pediatric nurse share an environment but not occupation.
Occupation & skills	Nanny, educator, assistant, therapist, teacher, coordinator, administrator, driver, etc.	Users search by work, not merely by institution.
Age cohort	Newborn / infant / toddler / preschool / primary / adolescent / non-contact.	Child-development competencies vary independently of employer type.
Employment arrangement	Full/part time, permanent, fixed-term, seasonal, internship, live-in, genuinely remote.	Schedule and agreement are orthogonal to role.
Geography / language	Country, region, city, timezone, currency, professional language.	Localization should not create duplicate systems.
Mobility declarations	International applications accepted; sponsorship; relocation assistance: yes/no/unknown.	Employer statements are not verified visa approvals.

The 16 career-setting families

REF	CANONICAL EMPLOYER SETTING
01	Private households & domestic care
02	Nurseries & daycare
03	Kindergarten & preschool
04	Primary schools
05	Secondary schools & colleges
06	International & private schools
07	Public education
08	Pediatric clinics & hospitals
09	Maternity & neonatal settings
10	Therapy & developmental centers
11	Hotels, resorts & kids clubs
12	Camps, sports & recreation
13	NGOs, charities & child welfare
14	School transport, food & operations
15	Digital learning & child content
16	Public agencies & specialist institutions

Simple international vacancy model

- Display job city/country, employer location, accepted applicant origins if specified, required languages, sponsorship **employer-declared** yes/no/unknown and relocation support yes/no/unknown.
- Provide destination-related official references when maintained; avoid proprietary legal eligibility conclusions or claims that a candidate is guaranteed entry/recognition.
- International search retains the exact same application, messaging, interview, offer and fraud-report infrastructure as a domestic job.
- Use localized labels, time zone and currency formatting and language-aware search. Initial EN/FR/AR and RTL requirements are planning proposals subject to G0 inventory and editorial readiness.

THE SINGLE SOURCE OF TRUTH

08 Canonical domain & data ownership

Design logical entities first. Reuse actual platform tables/services where semantics already exist; only introduce new persistence where G0 proves a gap.

DOMAIN AUTHORITY	OWNED INFORMATION
Identity & candidate	PlatformUser existing identity, CandidateProfile, Experience, Credential, PortfolioAsset, Preference, VisibilityRule.
Employer & membership	EmployerOrganization, EmployerSite, EmployerMembership, employer type, authorized public profile, Verification.
Jobs & taxonomy	EmploymentSetting, Occupation, Job, JobRevision, ScreeningQuestion, JobSearchIndex / public projection.
Applications & hiring	Application, immutable ApplicationSnapshot, ApplicationEvent, Evaluation, Interview, Participant, Offer.
Communication	Thread, Message, Notification, Alert, SavedSearch, SavedJob, TalentPool and membership.
Credibility & operations	EmployerReview, SalaryObservation, ModerationCase, SupportCase, AuditEvent, published editorial references.

Source-of-truth relationship contract

- One platform user may own one candidate profile and have zero or many explicit employer organization memberships.
- One employer can own many sites, jobs, hiring teams and consent-safe talent pools. Access always resolves through actual authorized membership and branch/site scope.
- One job may receive many canonical candidate applications. Submissions carry the job revision and profile/CV answers as of submission.
- Interviews, evaluations, offers and conversations are authorized through the relevant job + application + organization context.
- Job search, public employer search, alerts and published pages are projections of authoritative data; a stale index never overrides a closed/suspended source job.
- Private credential/evidence objects and public employer profile fields must never share uncontrolled read paths.

Data integrity choices to make explicit

QUESTION	RECOMMENDED CONTRACT
Double Apply	One canonical active application per candidate/job by default, with controlled reapply policy.
Job revisions	Publish revisions with status, editor, time and candidate snapshot reproducibility.
Employer closure	Close search visibility atomically; preserve legitimate historic application records under retention rules.
Membership removal	Immediately revoke protected employer reads, applicant access and signing permissions.
Content moderation	Hide suspended public records from search/cache and prevent new interactions as policy dictates.
Content ownership	Use existing CMS/Studio when verified instead of inventing a parallel content administration app.

STATE MACHINES, NOT LOOSE LABELS

09 Lifecycle states & business invariants

Business status must be authoritative and auditable across desktop, mobile, email, search, public pages and admin.

OBJECT	AUTHORITATIVE PROPOSED STATES	CRITICAL RULE
Vacancy	draft → pending_review → published → paused / expired / filled / closed → archived	Closed or paused vacancy cannot receive new applications; republication must be controlled.
Application	draft → submitted → acknowledged / under_review → shortlisted → interview → offer → hired / declined	withdrawn / on_hold / closed_due_to_vacancy are controlled alternative states; candidate-visible progress is truthful.
Interview	proposed → accepted / declined → scheduled → completed / canceled / no_show	Timezone normalization, actor permissions and genuine calendar event state.
Offer	draft → sent → accepted / declined / withdrawn / expired	Candidate response recorded; employer cannot unilaterally manufacture acceptance.
Verification	not_started → submitted → needs_information / under_review → verified / rejected / expired	Verified badge states exactly the verified attribute and validity; no implied universal safety clearance.
Moderation case	reported → triaged → under_review → action / no_action → appeal / resolved	Reporter privacy, evidence trail, fair review and public index synchronization.

Transition guardrail patterns

- Authorize actions on the server using actor identity, object ownership, organization membership/site scope and current state.
- Atomic mutation must verify expected version or event sequence; stale edits result in a meaningful conflict/reload path, not silent overwrites.
- Emit history records for publish/pause/close, application submission, meaningful stage changes, interviews, offers, moderation and revocations.
- Idempotency protects submit, publish, offer send, message send and notification retries. UI cannot create duplicates when a user double-clicks.
- Explain policy-driven transitions visibly; applicants must not see confidential evaluations, other applicants or unaudited claims of profile views.

TRUST WITHOUT INVASIVE FRICTION

10 Identity, authorization & privacy

Treat adults' employment information, household data, credentials and reviewer discussions as high-sensitivity information.

Authorization permission overview

ACTIVITY	VISITOR	CANDIDATE	HIRER MEMBER	ADMIN
Read active public job	YES	YES	YES	YES
Browse anonymous-safe employer card	YES	YES	YES	YES
Edit private Career Passport	NO	SELF	NO	Case-limited
Start/submit job application	NO	SELF	NO	Case-limited
Read candidate submitted application	NO	SELF	Role + site/job	Case-limited
See recruiter confidential notes	NO	NO	Role + job	Case-limited
Publish/edit employer vacancy	NO	NO	Role + org	Authorized moderation
Manage organization teammates	NO	NO	Org owner/admin	Case-limited
See raw verification documents	NO	OWNER POLICY	Restricted role	Restricted case
Review/suspend abusive content	NO	Report only	Report only	Policy + audit

These are **product authorization requirements**, not claims about current ACL implementation. Real database, storage, file download, search projection and API scopes must be reconciled during G0/G2.

Identity and privacy safeguards

- Household vacancies use approximate geography and safe aliases. Never expose exact home address, children's names/images or private family numbers in public metadata.
- Professional CV files, documents and messages use private storage, validated MIME/type/size, malware screening where available, sanitized rendering and short-lived authorized downloads.
- Recruiter search shows candidates who explicitly opted into discoverability; application submission does not make the entire profile globally public.

- Implement applicant blocking/visibility, account export and deletion workflows, consent audit, retention rules and revocation of compromised sessions.
- Admin actions require constrained authorization and auditable purpose; support impersonation/access must never silently create untraceable access.
- Child-safety and work-eligibility claims must separate identity, employment credential, organization legitimacy and legal background requirements; show provenance and limits.

AUTHENTICITY IS THE PRODUCT

11 Credibility, safeguarding & human operations

The platform must protect seekers and hirers while avoiding unnecessary barriers for ordinary discovery.

EMPLOYER PROVENANCE

Show what has been verified and by whom, with status and limits. A logo or email domain is not child-safety clearance.

VACANCY INTEGRITY

Detect impersonation, duplicates, misleading pay, fake overseas recruitment, dormant listings and suspicious contact behavior.

HOUSEHOLD PRIVACY

Protect precise address and details about children. Require only information needed for a legitimate vacancy and matching.

CANDIDATE SAFETY

Visible report controls, verified support, privacy, opt-in talent discovery, clear interview/offer terms.

REPUTATION

Moderated reviews, conflict-of-interest and appeal process; only real grounded workplace contributions.

SAFETY ESCALATION

Create case references, moderation decision history and clear human review/appeal route.

Careers administration: no fake “we will add it later”

OPERATOR CONSOLE	EXPLICIT OPERATION
Employer review	Verify claims/evidence, request clarification, approve/reject, handle revocations and badge lifecycle.
Job quality	Review suspicious content, duplicates, expired roles, mass posting, fraudulent salary/terms.
Reports and appeals	Case queues, priority, assigned owner, decision, evidence access, action and appeal outcomes.
Reviews and salary	Publish/moderate contributions with privacy limits, data provenance and disputable corrections.
Professional taxonomy	Controlled occupations, synonyms, sectors, age cohorts and approved public metadata.
Editorial and trust	Approve resource guides and approved imagery through verified existing CMS/Studio authority.
Operational health	Surface failed notifications, search staleness, suspicious activity and public state mismatches.
Audit	Record high-impact administrative reads/mutations, access grants/revocations and content decisions.

Trust copywriting rule

Use precise labels: “Organization identity reviewed”, “Qualification document received”, “Employer states relocation support is available”, “Not yet verified”. Avoid broad “safe professional”, “guaranteed job”, “verified sponsor” or “child-safe certified” assertions when not fully evidenced.

MAKE EVERY JOURNEY ACTUALLY WORK

12 Cross-cutting experience and platform services

Shared experience components, content controls, notifications and analytics are first-class requirements, not invisible infrastructure assumptions.

Component and interface kit

PUBLIC EXPERIENCE	PORTALS + WORKFLOWS
Global Careers chrome, adaptable navigation, sector discovery rail, hero search, profession chips, employer cards, job cards, vacancy status/compensation labels, linkable editorial sections.	Authenticated shell, role/org switcher, dashboard cards, reusable filters and lists, compare view, accessible pipeline/list alternative, dialogs/drawers, activity timeline.
Accessible save/apply/report/share controls, editorial image treatment, branded no-results states, guides, legal footer and mobile action bar.	Forms with autosave/validation, CV uploader, sanitized editor, inbox, alerts, scheduled calendars, offer editor, permission feedback, help/report entry.

One atomic state contract for all interactions

- Loading/skeleton, usable empty state, no permission, unauthenticated, account restricted, validation errors, offline retry, server failures, success receipt and concurrent edits.
- Network interruption and browser refresh must not lose a candidate application, employer vacancy draft or interview response.
- Every CTA names a real authorized operation, has visible feedback and a verified rollback/retry behavior. No inert drawers, ghost buttons or pretend status chips.
- Keyboard-driven alternatives for boards; accessible labels, logical focus, no hover-only actions, comfortable mobile touch sizes and RTL-ready layouts.
- Editorial images and logos must be canonical/authorized; decorative content cannot imply real employees, premises or platform outcomes.

Notifications and messaging

SOURCE EVENT	USER-FACING DELIVERY RULE
Application submitted	Candidate receipt plus hirer new-applicant notice; ID and link derive from canonical application.
Stage / interview changed	Only meaningful authorized updates; dedupe and correctly localize date/time.
Offer sent / responded	Secure notification and durable authoritative offer detail, not just untracked email.
Job closed / expired	Remove from active alerts; update saved job views and public search/SEO surfaces.
Account / trust event	Clear security or moderation message with support route, respecting safety and privacy.
Saved search alert	Respect consent, frequency, unsubscribes, relevance and inactive jobs.

PRODUCTION-GRADE PUBLIC CREDIBILITY

13 SEO, accessibility, performance & observability

A job marketplace earns trust through discoverability, reliability and transparent failure handling as much as through visual polish.

Search indexing and publication discipline

- Serve crawlable public job details that correspond to live canonical vacancies; add valid JobPosting structured data only on eligible single-job detail pages.
- On closing/expiry, synchronize the job record, search index, alerts, landing pages and structured data. Do not continue advertising an expired job as actively recruiting.
- Use true canonical URLs and locale alternates where appropriate, and avoid generating thousands of empty city/sector/filter combinations.
- Publish quality sector, employer, role and destination fronts with substantive grounded material; link them coherently from the home/search navigation.
- Keep employer-provided and independently verified assertions visually distinct. Avoid invented aggregate salary/review values.

Accessibility acceptance: WCAG 2.2 AA target

AREA	PASS BEHAVIOR
Navigation	Tab order, focus visible, keyboard-only complete flows, skip links and sensible headings.
Forms	Labels/errors described programmatically, preserved entries, explain required fields, password manager compatible.
Recruitment boards	Accessible list/table alternative; stage change does not require drag-and-drop.
Media & visual	Contrast, alternative text for meaningful media, reduced motion, mobile zoom and responsive layout.
International	RTL Arabic where localized, semantic language tags, 12/24-hour time and currency presentation consistency.

Core quality targets

MEASURE	PRODUCT ACCEPTANCE IDEA
Core Web Vitals	Target good p75 experience: LCP ≤ 2.5 s, INP ≤ 200 ms, CLS ≤ 0.1; segment by device/network.
Workflow safety	No duplicate application after retry; no unauthorized candidate downloads; no ghost published jobs.
Job search freshness	Set observed, testable publication/closure latency SLO after infrastructure validation; monitor drift.
Messaging & notification	Trace source event → durable delivery attempt → user delivery state; expose retries/errors.
Operational visibility	Live error dashboards for auth, upload, application, job publication, search index, notification queue and moderation.

Reference standards used as planning targets: W3C WCAG 2.2; OWASP MFA guidance; Google Search Central JobPosting guidance. These external standards are not evidence that an existing AngelCare implementation is compliant.

ACCEPTANCE IS A REAL JOURNEY

14 Eight fully traceable end-to-end scenarios

These are end-to-end tests across identities, persistence, public pages, permissions, events and user-visible outcomes.

SCENARIO	FULL JOURNEY	MANDATORY ASSERTION
A — Organic candidate	Search result → live job → apply → sign up/verify → CV/review → submit → track → recruiter sees application.	One canonical snapshot and honest receipt.
B — Household	Family signs up → safe alias → posts childcare role → evaluates adult candidate → interview → offer → reply.	Address and child identity stay private.
C — Institution	School/branch setup → invite recruiter → multiple jobs → panel interviews → offers → close roles → insights.	Site roles and private evaluations enforced.
D — International	Search from origin country → destination/overseas acceptance → sponsorship statements → apply → timezone interview.	No immigration approval claim.
E — Dual-role user	Candidate later joins employer account → switches safely between personal and organization contexts.	Colleagues cannot access private career history.
F — Trust incident	Report fraudulent listing → moderation case → visibility action → affected users → appeal and cache update.	Case and public changes traceable.
G — Expiry	Job publishes → expires/closes → search/alerts/structured data updated; saved history survives.	No false active listing after closure.
H — Interruption	Candidate drops network during CV/upload or application → resumes → submits safely.	Zero lost draft and zero duplicates.

Negative and adversarial acceptance checks

- User A cannot enumerate User B's CV/download URLs, application history, direct messages, saved jobs or credentials.
- Employer member cannot access a branch/organization after role revocation, even via bookmarked URLs or old download links.
- Candidate cannot modify a closed vacancy; recruiter cannot force accepted-offer state on a candidate.
- Expired/suspended or pending-review vacancy is invisible in active public search, despite search-index/cache delays.
- Double-click, request retry and repeated event delivery never create duplicate applications, offers or messages.
- Unverified employer claims, salary/reviews without evidence and fabricated badge components fail publication checks.
- RTL, mobile, keyboard, screen-reader and lower-bandwidth smoke tests pass core signup, post, apply, interview and reply paths.

DO THE RIGHT WORK IN THE RIGHT ORDER

15 Engineering gate plan G0–G7

These work packages are deliberately dependency-driven. Never ship decorative portal shells before the shared recruitment lifecycle is implemented.

GATE	WORK PACKAGE	ENGINEERING TASK	EXIT EVIDENCE
G0	Source authority audit	Read-only inventory of actual routes, auth, organizations, Studio/CMS, files, search, events, data owners, admin and deployment.	Verified inventory, route collision report, reuse/new map; no guessed filenames or tables.
G1	UX and route contracts	Navigation matrix, desktop/mobile flows, 4 user-world IA, sector taxonomy, common components, every CTA/state/permission.	Approved screen contracts + journeys + accessibility design spec.
G2	Identity and canonical engine	Role and organization memberships, jobs/apps/offer lifecycles, private storage, permission enforcement, audit and moderation skeleton.	Automated authorization, states, atomicity and record integrity.
G3	Real public listings	Build home/search/detail/sector/role/employer pages and functional hirer draft/review/publish + indexing.	One legitimate published job is searchable, actionable and closable.
G4	Complete recruit-to-hire	Candidate auth, Career Passport/CV, application, recruiter pipeline, inbox, interviews, offers and candidate response.	Two test users complete a traceable hire end-to-end.
G5	Premium operational UX	Advanced search/alerts, opt-in talent, pools, compare, team/sites, international filter, insights and explainable assistance.	Real data, consent and permission checks for advanced features.
G6	Trust + public maturity	Reviews/salary when actual data, resources/editorial, human support, multilingual a11y, SEO and abuse workflows.	Authenticity, accessibility, index hygiene and dispute handling verified.
G7	Production certification	E2E A–H, red-team checks, source/build/deploy attestations, regression, monitoring and rollback.	Artifact SHA/image digest/live service alignment; acceptance evidence signed.

Mandatory gate closeout packet

- Changed-file manifest and exact source revision; actual authorities reused and newly created; intentional exclusion list.
- Targeted type/test/a11y/security results, real screenshots of key responsive states, E2E execution logs and known limitations.
- State of blocking defects with owners; no hidden rollback of failed assertions, no “green” release based only on compilation.
- Explicit management approval to move to next gate, with changes traceable to blueprint requirements.

DEFINITION OF A “WORKING PHASE”

The output of G3 is a real published and searchable job. The output of G4 is a completed end-to-end hiring journey. A UI screenshot, a passing TypeScript check or a successful build cannot replace these proofs.

ADDITIVE-ONLY RELEASE DOCTRINE

16 AngelCare integration, deployment & source preservation

The existing marketplace and operational setup are part of the product contract. Careers cannot break the experiences that are already operating.

Protect the real current platform

- Primary source scope is **apps/marketplace-web**. No speculative independent Next.js app, identity stack, database, CMS or billing domain.
- Preserve Families and Services storefronts, Academy, DCE, all current homepage worlds, Public Experience/Studio authority, global header and footer, and 12-storefront navigation contract. Careers entry is additive and approved.
- Reuse current auth, media, CMS, mail/events and admin where verified. All new migrations, APIs and permissions require the actual G0 source evidence.
- Enforce strict changeset scope; avoid staging unrelated VoltHub, DCE or homepage development when releasing Careers.
- Local source patch/apply verification must not invoke the local build under the established workflow. Use targeted checks; remote image pipeline remains deployment authority.

Source-to-production immutable release chain

REMOTE RELEASE EVIDENCE PATH

Canonical intended remote release: GitHub Actions workflow “Build Marketplace GHCR One-Off” → immutable **ghcr.io/angelcare-morocco/angelcare-marketplace:<exact-source-SHA>** image → verify registry image digest → Coolify Deploy Without Cache → public + candidate + hirer + admin live smoke checks.

RELEASE GATE	REQUIRED PROOF
Source scope	Exact file manifest, targeted test output, no unrelated staged files, source SHA.
Build lineage	Workflow run explicitly tied to intended source revision; successful artifact with immutable digest.
Deployment	Coolify runs that digest; env and storage/DB changes reconciled; rollback pathway recorded.
Smoke	Public job index and detail; protected signup/signin; candidate apply; hirer publish/manage; messaging/trust health.
Regression	Existing marketplace, Studio, Families, Academy, DCE, header/nav/footer gates still pass.
Monitoring	Operational error, application delivery, job search freshness and alerting verified on live environment.

MANAGEMENT SIGN-OFF CONTRACT

17 Release acceptance, ownership & next action

The final deliverable is an operational employment product whose public claims and user journeys can be demonstrated against real records.

Release-ready checklist

- **01** □ Public careers homepage plus sector, role, location, employer, international, support and policy fronts all navigate correctly.
- **02** □ Real current vacancies are search-indexed and show accurate status, employer identity and declarations.
- **03** □ Candidate/hirer sign-up, sign-in, recovery, verification and safe role switch are functional.
- **04** □ Candidate Career Passport, CV/portfolio, opt-in visibility, applications, inbox, alerts and account controls work.
- **05** □ Employers can create organizations/households, verify, publish, review candidates, communicate, interview, offer and record outcomes.
- **06** □ Organization membership/site scopes and candidate data privacy pass real server-side negative tests.
- **07** □ All messages, alerts, calendar actions, incidents and support cases have meaningful statuses and real audit trails.
- **08** □ Job closure/expiry propagates to search, alerts and structured data; no false active job survives.
- **09** □ Cross-border disclosures are accurate employer statements, not unsupported visa promises.
- **10** □ Core journeys remain usable on mobile, keyboard/screen reader, RTL where shipped, and interrupted connections.
- **11** □ E2E scenarios A–H pass, including abuse and privacy tests; no build-only acceptance substitution.
- **12** □ Existing marketplace surfaces survive all regression gates; live digest/source provenance and rollback are proven.
- **13** □ No monetization components, price plans, billing, paid boosts, commerce checkouts or paid gating are present.

Executive operational measures — define, do not fabricate

MEASURE	PRECISE EVENT BASIS
Active real employers	Organizations with legitimate, current recruiting activity and defined verification criteria.
Live valid vacancies	Canonical published, not expired, not suspended/closed.
Completed applications	Canonical successful submission, deduped by application ID.
First hirer response	First authorized meaningful reply after successful application, tracked by server timestamp.
Interview / offer / hire	Auditable state changes, confirmed offer outcomes; do not conflate hirer-selected status with acceptance.
Safety & publication health	Report-to-resolution time, stale listing share, queue failure, index drift, user-reported issues.
Experience success	Application starts vs completed submissions, no-result searches, return visits and abandonment causes.

First five engineering artifacts — G0 → G1

- **CAREERS_SOURCE_AUTHORITY_INVENTORY** — Actual source, routes, shell, auth, roles, organizations, data, Studio, CMS, media, messaging, release authority.
- **CAREERS_ROUTE_AND_NAV_MATRIX** — All public, candidate, hirer and admin routes; CTAs; link destinations; state/permission expectations.
- **CAREERS_DOMAIN_OWNERSHIP_MAP** — Reuse vs additive persistence, access controls, canonical owners, events, projection rules, no duplicate authority.
- **CAREERS_UX_SCREEN_CONTRACTS** — Desktop/mobile composition, underlying components, data states, user-facing copy/actions, accessibility.
- **CAREERS_E2E_AND_RELEASE_GATES** — A–H test journeys, negative permissions, regression and release attestation template.

FINAL MANAGEMENT INSTRUCTION

Authorize G0 source reconciliation first. Release engineering to implement only after the resulting route, domain ownership and UX contract matrices agree with the actual repo. The end goal is an authentic, premium, complete career marketplace - not speculative architecture or a decorative demo.

IMPLEMENTATION APPENDIX

A Experience pattern library

Reusable design decisions and detailed interface behavior for quality assurance.

Responsive experience contract

SURFACE	DESKTOP / LARGE SCREEN	MOBILE / ACCESSIBLE FALLBACK
Search	Query bar, location, filter sidebar, list/map when useful.	Sticky query and active chips, filter sheet, full-width scannable cards.
Job detail	Employer/requirements, supporting sidebar, persistent apply CTA.	Readable segmented sections, sticky/safe apply bar, no obstructive popups.
Career Passport	Structured professional editor, side navigation, completion suggestions.	Progressive editable sections, autosave, large upload affordances.
Applications	Filterable list/status/timeline and deep details.	Card listing, clear next action, collapsible status history.
Hiring pipeline	Kanban plus explicit table view, bulk actions and evaluator panels.	Accessible list/table, stage menu; never rely on dragging.
Messages	Two-panel inbox and threads, files and appointment references.	Single-pane inbox/thread navigation with persisted drafts.
Admin	Queue/list, case inspector, evidence provenance and decision log.	Responsive case review that preserves complete audit context.

Standardized failure and recovery patterns

FAILURE STATE	SAFE USER OUTCOME
Job expired mid-apply	Preserve draft for reference; block submission; clearly show closed state and real related opportunities.
Email verification delayed	Allow resend with throttling and account recovery; resume intended route after success.
CV upload failed	Explain format/size issue, preserve form and allow retry; avoid exposing uploaded raw files publicly.
Application submit unknown	Check server canonical status; show pending/retry without creating duplicates.
Employer permission revoked	Stop protected access immediately; display neutral permissions guidance and support link.
Concurrent job editing	Show conflict/version and compare changes, rather than silent overwrites.
Messaging service unavailable	Preserve composed message securely, retry once restored, show honest delivery state.
Failed notification	Application remains recorded; retry asynchronously and surface operator diagnostics.
Suspicious posting reported	Create report receipt; prevent unsafe exposure when actioned; document human review.

IMPLEMENTATION APPENDIX

B Screen and component acceptance matrix

A compact cross-product design review matrix that prevents missing user interface states.

SCREEN FAMILY	TRIGGER / INPUT	VISIBLE OUTPUT	STATE / PRIVACY GUARD
Public homepage	Click role/sector or submit search	Relevant populated canonical listing/front	Empty/missing sections degrade gracefully.
Job filters	Change role/region/compensation	Encoded query and legitimate result count	No fake counts; clear reset.
Public employer	Select organization	Actual identity, locations and current jobs	Household aliases; vetted media.
Candidate signup	Enter login + role intent	Account, verification state, preserved return path	No CV coercion; throttled recovery.
Candidate passport	Update specialty/CV/preferences	Private versioned candidate data	No public discoverability unless opted in.
Submit application	Review answers and click Submit	Receipt + canonical snapshot	Exactly-once; vacancy still open.
Candidate inbox	Send reply/reschedule	Permitted thread and response state	Authorized pair only; files private.
Hirer signup	Choose employer setting	Org/household profile + first draft	Risk-appropriate checks; safe address.
Publish vacancy	Review & publish	Canonical published job searchable	Verification and state guard.
Pipeline stage	Shortlist/invite/reject candidate	Auditable status change	Human actor; authorized org/job.
Send interview	Choose time, format, participants	Both timezone-aware invitations	No duplicates or phantom attendance.
Send offer	Review terms and dispatch	Offer detail + candidate decision workflow	No manufactured hire acceptance.
Report content	Flag job/organization/message	Case reference and appropriate follow-up	Privacy, fairness and human escalation.
Admin moderation	Decide after evidence review	Public state corrected; audit trail	Restricted access; index and cache sync.

IMPLEMENTATION APPENDIX

C Engineering decisions ledger

Explicit trade-offs resolve avoidable platform complexity before code is written.

DESIGN QUESTION	PREFERRED DECISION	CAVEAT / EVIDENCE NEEDED
Standalone Careers app?	No; additive domain in current marketplace app.	Confirm route and bundling architecture in G0.
Two auth systems?	No; shared identity, role-aware experiences.	Verify existing identity/profile/member relationships.
One backend per country?	No; global taxonomy and location data.	Local obligations still apply where relevant.
Native application or redirect?	Native end-to-end default; explicit external redirect only where supported.	Never imply tracking of off-platform outcomes.
AI auto-reject?	No; assist humans, transparent explainable recommendation.	No inferred sensitive traits or secret scoring.
Public candidate profiles?	Private by default; opt-in controlled recruiter discovery.	Consent/visibility policy must be implemented at query level.
Employer verified badge?	Attribute-level sourced verification.	Identity or email check alone is not child suitability.
Separate hiring service product?	No cart/SKU/checkout. Job is an employment record.	Existing commerce authorities untouched.
Reviews/salary launch?	Only with defensible provenance, moderation and real samples.	Do not fabricate content to fill homepage.
Add paid features now?	No. Entirely excluded.	Future commercial review is independent of R1.
Build locally for patch verification?	No under current source-stage preference.	Targeted checks then authorized remote image pipeline.

EVIDENCE APPENDIX

D Source notes, limitations & reference standards

This edition expands the supplied R1 blueprint into a management-quality execution handbook. Proposed contracts are not statements of implementation.

Provenance

Primary source: “ANGELCARE CAREERS 2027 — MASTER ENGINEERING BUILD BLUEPRINT R1”, dated 19 October 2026, supplied in the conversation. This publication preserves its intended navigation, candidate/hirer operating scope, 16 employer sectors, authority boundaries, lifecycle approach, G0–G7 sequence, safety and release doctrine while adding detail-oriented experience and engineering acceptance matrices.

Product and editorial additions: Tabulated anatomy, release decision ledger, expanded API/state guard examples and responsive/failure matrices are proposed elaborations, not audited repository facts. No commercial monetization system is designed here.

Normative external guidance included as targets

The mandatory verification disclaimer

The document is **an engineering-ready proposed product contract, not a source-code audit, legal advice, competitor certification or deployment attestation**. No production route, SQL table, feature, external integration, compliance status or publication claim may be treated as confirmed until independently verified through G0 and the respective engineering/release gates.

Exclusions retained from the approved project

No monetization, subscriptions, advertisement placements, paid recruiter boosts, hiring commissions, optional workforce software, product checkout, bespoke nationwide compliance engines, automated immigration eligibility determinations, non-consensual recruiting identity exposure or autonomous AI applicant rejection. Essential privacy, legitimacy and safeguarding are not optional and remain in scope.

DOCUMENT FINISH

ANGELCARE CAREERS 2027 · R1 MASTER BLUEPRINT · The first action is source reconciliation. The acceptance standard is a complete, credible, demonstrably working employment journey for both sides.
